PathFinder – Smart Career Roadmapping for Aspiring Data Analysts

Solution Overview - We have built PathFinder, an intelligent and interactive web app designed to be a "career GPS" for students like Riya who feel lost on their path to becoming Data Analysts.

Key Features

Personalized Skill Assessment: Multi-step form collects academic background, self-assessed skills (SQL, Python, Excel, etc.), and career goals, with real-time validation and smooth transitions.Dynamic Roadmap Generation: Tailored learning path based on skill gap analysis; each step includes objectives, skills, and mapped resources.Curated Resources: Auto-fetches quality content from YouTube, Coursera, edX, PDFs—filterable by skill, difficulty, format, and platform.Progress Tracking: Visual progress indicators, badges, and percentage bars keep users engaged and informed.Community Contribution: Users can upload and categorize new resources, promoting peer learning.Offline & Low-Data Mode: Cached resources and lightweight frontend ensure accessibility on limited connectivity.Tech Stack & Architecture

Page Flow

Home: Intro, value proposition, and CTA.

Assessment: Multi-step form for user input.

Roadmap: Interactive, stepwise roadmap with embedded resources.

Resources: Searchable, categorized learning library.

Upload: Add new resources with validation.

404 Page: For invalid routes.

Design & Experience Highlights

Mobile-first, responsive design with reusable components, icon-driven UI, and accessible transitions.

Scalability & Future Scope

Mentorship system, certification tracking, user authentication, leaderboards, and community engagement.

Why It's One of the Best

Solves a relatable student problem with a smart, scalable solution built using modern tools and clean UX, ready for real-world deployment and future expansion.
